INVESTMENT OBJECTIVE AND STRATEGY

The fund seeks long-term growth of capital.

The fund normally invests in small- and mid-cap U.S. companies. The fund expects to invest predominantly in common stocks, but may occasionally purchase other types of equity securities or equity-related instruments.

Our integrated approach to investing combines fundamental analysis and quantitative models to help shape our process for security selection, portfolio construction, and risk management in a systematic manner.

The portfolio is generally constructed by buying higher ranked stocks and selecting stocks to sell from those that have a lower rank, subject to overall risk controls and desired portfolio characteristics.

BENEFITS AND RISKS

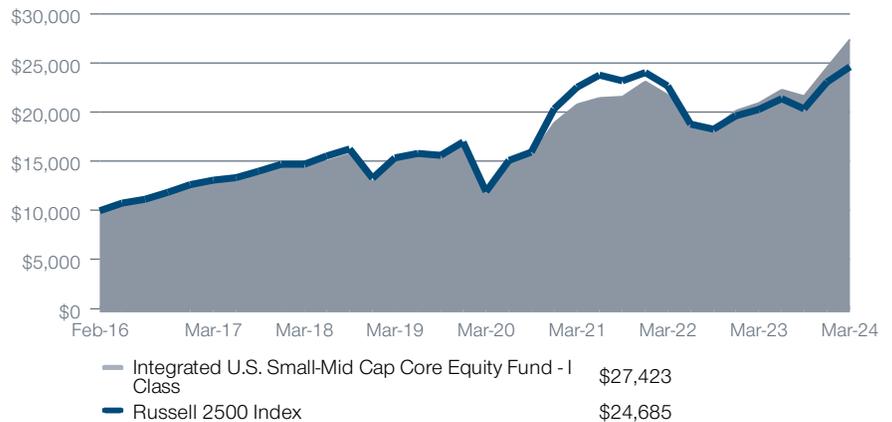

The fund is broadly diversified and invests primarily in securities issued by small- and mid-cap companies. It is likely to be more volatile than a fund that focuses on securities issued by larger companies.

The fund's strategy relies heavily on quantitative models to analyze data and construct investment portfolios which entails risk that the models may be limited, incorrect, or incomplete and may impact the selection of stocks.

The fund's share price can fall because of weakness in the broad market, a particular industry, or specific holdings

Definitions

Beta: A measure of market risk of an investment option that shows how responsive the investment is to a given market index, such as the Standard & Poor's 500 Index. By definition, the beta of the benchmark is 1.00. An investment with a beta of 1.10 is expected to perform 10% better than the index in up markets and 10% worse in down markets. Usually, higher betas represent riskier investments. Figures are calculated using monthly data and are net of fees.
